

Stakeholder Map — Client Onboarding & KYC Workflow Optimization

Stakeholder	Role	Primary Goal	Primary Fear	Influence	Interest
Priya Nandan	Compliance Lead	Zero AML/KYC regulatory exposure; clean audit trail	Regulatory fine, reputational damage from a missed PEP/sanctions hit	High	High
Aravind Mehta	Product Manager (Growth)	Maximize onboarding conversion; reduce signup-to-activation time	Losing users to a slow, over-verified signup flow vs. fintech competitors	High	High
Lena Fischer	Engineering Lead	Buildable, maintainable spec; predictable integration with KYC vendor APIs	Vague or shifting requirements that blow up sprint estimates	Medium	High
End User / Applicant	Person signing up for the account	Fast, low-friction onboarding	Abandoning signup out of frustration, or being wrongly flagged as high-risk	Low (no direct voice in requirements)	High (the subject of every requirement)
Regulator (implicit)	External body (e.g., FINMA-style / RBI-style AML authority, depending on market)	Institution demonstrably applies risk-based due diligence	Institution treating all customers identically regardless of risk (regulatory red flag in itself)	High (external, non-negotiable)	Medium (only engages if something goes wrong)

Persona briefs:

Priya Nandan — Compliance Lead

Cares about: defensible audit trails, EDD on PEPs and high-risk profiles, regulatory reporting readiness. Will block any change that can't be justified to a regulator. Doesn't care about conversion metrics — cares about exposure.

Aravind Mehta — Product Manager

Cares about: TTO (time-to-onboard), drop-off rate, activation rate. Measured on growth numbers. Sees compliance friction as a tax on every user, applied even to the 80%+ who are completely low-risk.

Lena Fischer — Engineering Lead

Cares about: a spec precise enough to build against without back-and-forth. Wants explicit thresholds, explicit error-handling rules, explicit field mappings — not prose intentions. The natural ally of a BA who writes numbered FRs instead of vague goals.

The conflict, named directly: Priya and Aravind are structurally opposed if the system treats every applicant identically. The BA's job is to make that conflict disappear — not through compromise (e.g., "let's add medium friction for everyone"), but through **segmentation**: low-risk users get Aravind's fast flow, high-risk/PEP users get Priya's thorough flow, and nobody pays for friction they don't create risk for.
